

Product / Service Discontinuation Notice

TO WHOM IT MAY CONCERN

Dear Sirs

In February 2017, Lumentum Inc. has acquired 100% stake in Optacore d.o.o. in Ljubljana, Slovenia. After much consideration, Lumentum has decided to terminate Optacore's supply of fiber fabrication equipment to customers worldwide and concentrate on the new core business – fabrication of optical fibers for high power fiber lasers and laser applications.

Based on this decision we would like to inform you that Lumentum Slovenia (former Optacore d.o.o.) shall not accept any new orders for equipment or support from August 10, 2018, on. This does not concern any open orders (projects currently on back-log) or any of the projects under guarantee. Furthermore, Lumentum Slovenia shall discontinue all support and delivery of parts or software for the complete range of Optacore developed and delivered equipment.

We realize that such a change of policy may cause customers some concern, so the following has been organized:

1. support for WinMCVD and related software shall be provided by Blubit d.o.o. or their agents for respective regions, for software version up to, and including , version 17,
2. support for Jutronic inductive generators, end-stage transformers and coils, used in Optacore's inductive furnace designs MCF-32, MCF-33, MCF-34 or MCF-35 shall be provided directly by Jutronic d.o.o. or their their agents for respective regions,
3. raw materials for chelate doping process shall be available from exclusive distributors in China and Japan, or by original supplier in other regions without Lumentum Slovenia participation.

We thank you for your understanding and wish you success in your future activities,

Borut Lenardič
Director
